

PLASSON
Chain feeder for breeders

 **PLASSON**[®]

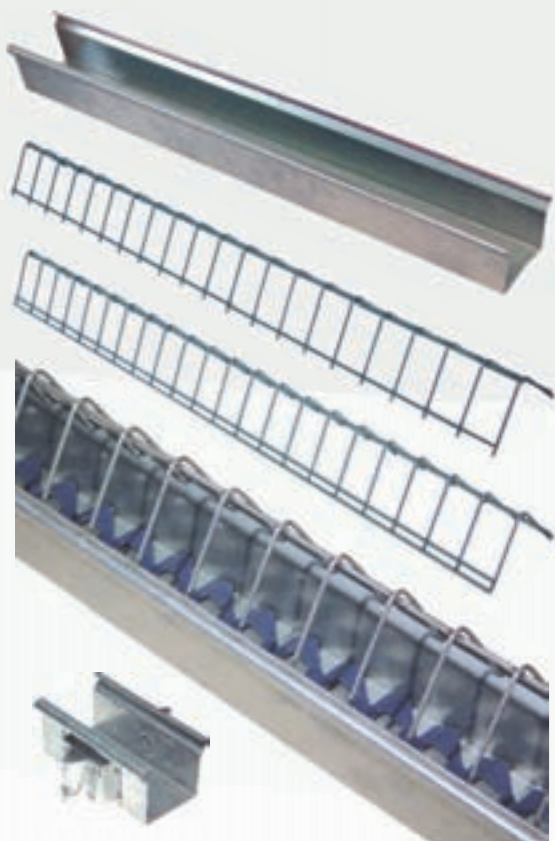

World Class Poultry Systems

Corners 90°

The corners have a special treatment that provides high credibility of the system and enables smooth low noise operation.

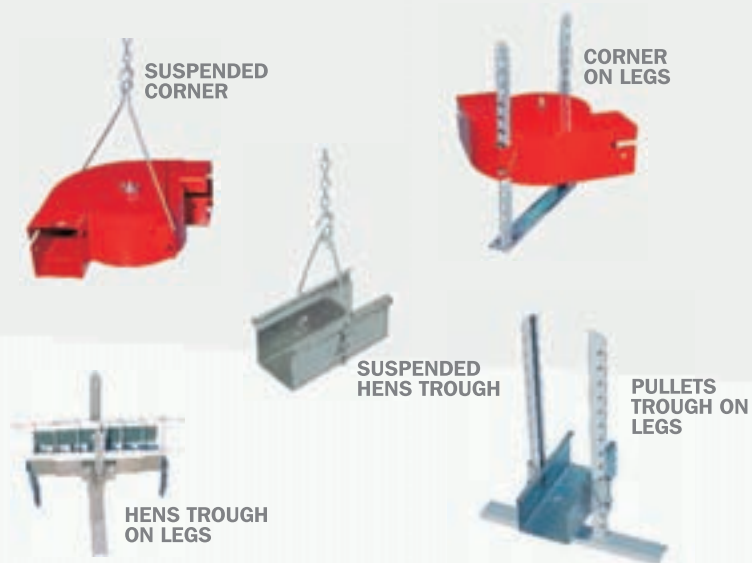

Troughs, couplers and grills

The troughs and couplers are manufactured in galvanized steel and specially developed for breeders. The restriction grills are galvanized and can be supplied according to customer requirements.

Suspension

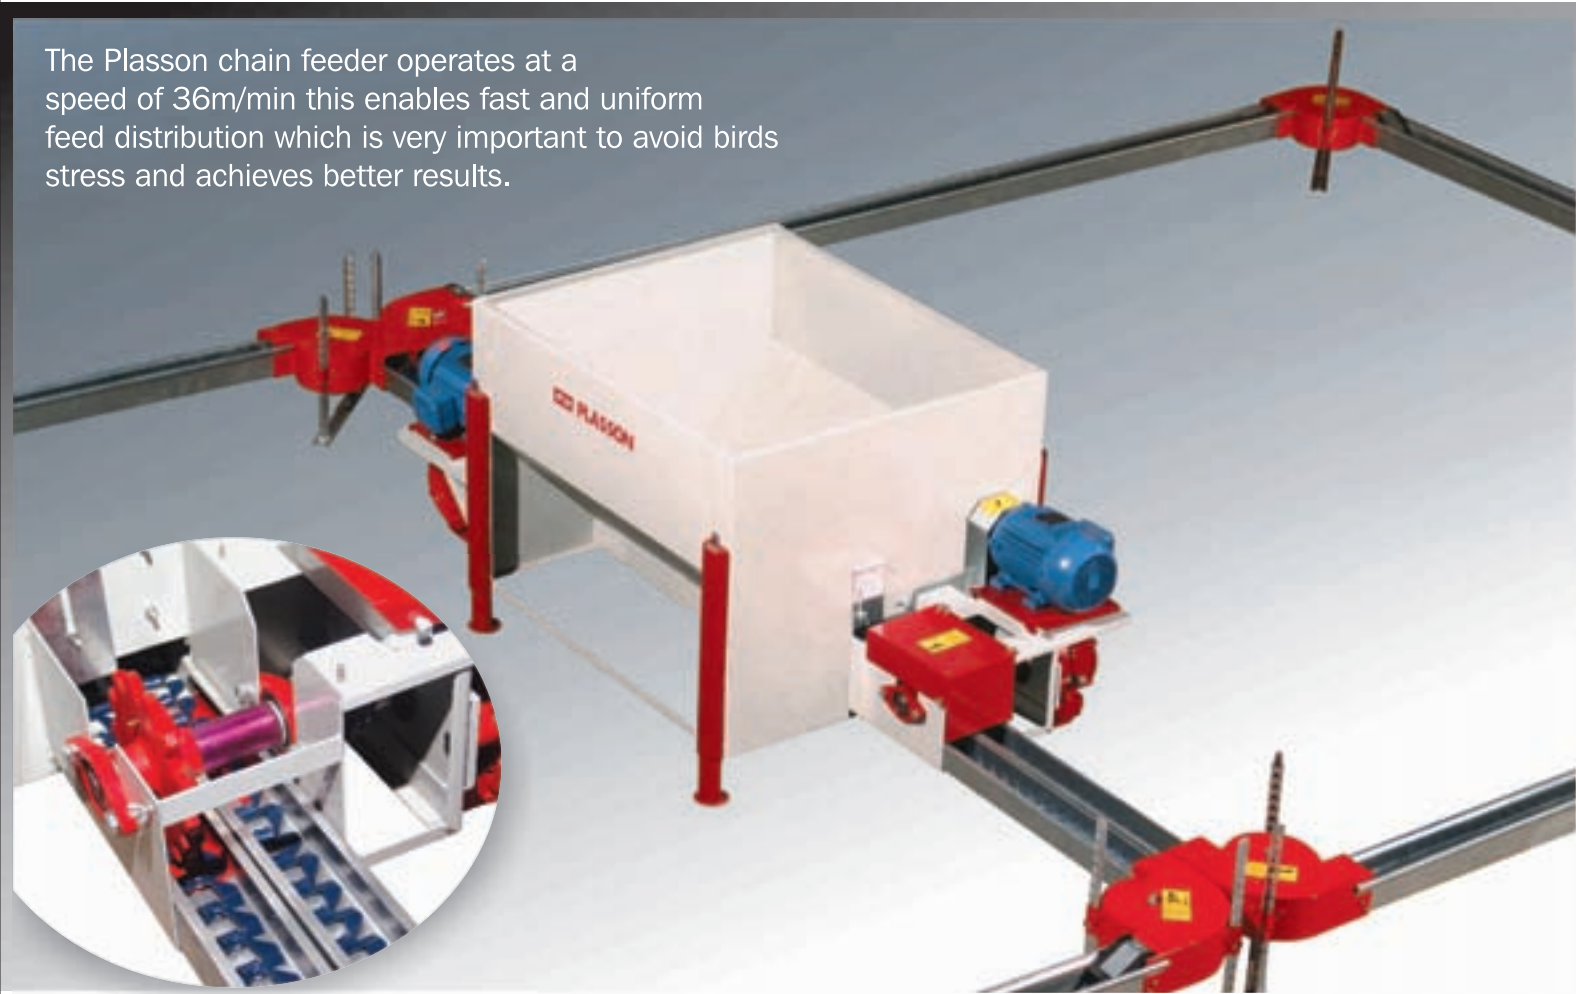

The Plasson chain feeder can be operated either on legs or suspended. In both cases the adjustment is easy and simple.

Weighing system

The Plasson chain feeder operates at a speed of 36m/min this enables fast and uniform feed distribution which is very important to avoid birds stress and achieves better results.

Feed hoppers

HOPPER 1C
(1 line)

HOPPER 2C
(2 lines)

HOPPER 4C
(4 lines)

The Plasson feed hoppers can be installed with 1, 2 or 4 lines. The feed distribution can be in one direction (1 motor per hopper) or in two directions (2 motors per hopper). All models are made with a special finish in epoxy painting. The moving parts have a special treatment to avoid the wear created by contact with the chain, this enabling higher wear resistance and longer life.

Hopper capacity:

Model	Capacity
Hopper 1C w/o extension	260kg
Hopper 1C with extension	430kg
Hopper 2C w/o extension	300kg
Hopper 2C with extension	500kg
Hopper 4C w/o extension	385kg
Hopper 4C with extension	625kg

Feed return

This system avoids excess feed from spilling out of the trough when the feed returns to the hopper.
